April 26 Edition

To our TekBeacon readers,

Enterprise software fatigue is real – and expensive! After investing heavily in platforms over several years, organizations find themselves drowning in complexity - spiraling costs, fragmented workflows, and intelligence trapped across disconnected systems.

But what if the answer isn't buying more software? What if it's unlocking the untapped potential already sitting in your data estate?

In this edition of TekBeacon, we present a landmark shift. We're introducing a category that doesn't add to your tech stack. It transforms it into something far more intelligent.

The future of enterprise decision-making starts here.

Introducing **Hoonartek's ClearView™**, a first-of-its-kind data solution designed to reduce SaaS bloat, activate data estates, and help enterprises move from system-heavy operations to intelligence-led execution.

In The Spotlight

New HQ

This month marked an important milestone with the inauguration of our new headquarters at Escala, Kharadi, Pune, on 10th April. Designed as a modern collaborative workplace with larger capacity, upgraded facilities, and thoughtfully built team spaces, it reflects the next phase of Hoonartek's growth.

The office was inaugurated by Amanjaved Shaikh, whose 15+ years with Hoonartek symbolize the resilience, progress, and values that continue to shape our future. This new headquarters is more than a workplace; it is the heart of our momentum.

Recognitions

Hoonartek has been recognized in the 'Challengers' Quadrant of the AIM Research Top Generative AI Service Providers Quadrant 2026

Leaders' Lens

Check out our brand new leadership newsletter, **The Grounded Playbook**, authored by **Shriram PV**, COO, Hoonartek. It is a pertinent and timely meditation on practical leadership in data and AI.

In its debut edition, **“Governance Didn’t Break, We Abandoned It”** Shriram shares why strong governance is built through discipline, not hype.

The ClearView™ Blueprint

Overview

For years, enterprises have modernized by adding software. New functions meant new platforms. What began as a transformation became fragmented systems, rising costs, and buried decision logic.

The Structural Problem

Most organizations already possess strong systems of record, ERP platforms, CRM stacks, core operational systems, and modern data estates. Yet many critical business decisions still sit inside scattered tools, workflows, and vendor-owned logic. The result is automation without adaptability.

What ClearView™ Changes

ClearView introduces a new category: an Agentic Decision Layer. It sits above existing enterprise systems and uses governed AI agents to execute real business decisions across operations, risk, servicing, growth, and customer journeys.

This means enterprises do not need to replace core systems. They simply regain control over how decisions are made.

Industry Use Cases

- **Banking:** Slow credit approvals and fragmented collections strategies are replaced with real-time, governed decision orchestration.
- **Insurance:** Reduce delays in claims triage and underwriting through faster, explainable, and intelligence-led decision workflows
- **Manufacturing:** Reactive production planning and quality escalations shift to adaptive, AI-driven operational decisions.
- **Telecom:** Network faults, churn risks, and revenue leakage are addressed through coordinated autonomous decisioning.
- **Retail:** Pricing, promotions, and inventory decisions move from siloed systems to real-time margin and demand intelligence.

Solving Software Bloat

Instead of adding more point solutions for every new need, ClearView helps reduce technology sprawl by consolidating fragmented decision-making workflows into a single intelligent operating layer.

- Less overlap.
- Lower cost.
- Clearer ownership.

Activating the Data Estate

Many enterprises have already invested heavily in cloud warehouses, lakehouses, pipelines, and data lakes. ClearView maximizes those investments by connecting trusted data directly to decision execution.

Built for the Next Enterprise Era

Every decision remains traceable, governed, and explainable from intent to outcome. That makes ClearView especially relevant for

regulated industries where trust, control, and speed must coexist.
This is not another tool. It is a smarter operating model for the
modern enterprise.
